

Students at Swift Elementary School participated in the Hour of Code, a national movement to get kids of all ages involved in Computer Science. They learned the basics of coding as they progressed through several lessons until they were able to create their own version of either a Star Wars or Minecraft game. The following week, the students applied their new programming skills to the field of robotics. Using a programming language, they commanded a robot to move in different directions, light up in different colors, and play sounds at various frequencies.
